

## [Feature Spotlight] Using the Multiple Monitor Span Display in Remote Desktop Manager

## USING JUST ONE MONITOR DOESN'T CUT IT ANYMORE

These days, using just one monitor doesn't cut it anymore with Zoom meetings, chat apps, and SO MANY BROWSER TABS OPEN ALL THE TIME (honestly, it's really out of control).

Well, we have some good news for those of you who want more visual real estate: when using Remote Desktop Manager, you can easily display multiple remote screens from an RDP session. The only requirement is that you need to have the same number of local monitors as remote monitors (e.g., if you have one local monitor, and there are two remote monitors, then you will only see the primary screen of the remote monitor).

Here are the simple steps to enable this feature:

1. Launch RDM, right click on an RDP entry, and then click **Properties**.

2. Select the **General** side menu and change the local Display to **External** (the multiple monitor display is only available in External display mode).

Remote Desktop Mana	nark DC1 [Tel	emark]

Ø VPN/SSH/Gateway	General	Display	Local Resources	Programs	Experience	Connection	Advanced	
Management Tools 🛛 👻			- An	re AD host				

3. Select the **Display** section (from the menu tabs) and enable the option **Span on multiple screens if possible**.

		Span on multiple screens	if possible				

## Using Multiple Monitors for a Remote Session

If you wish to use multiple monitors for a remote session, then you'll need to set your display ID. This is necessary because the Windows screen display ID is not necessarily the same as the RDP. In addition, RDP monitors ID start with 0 and not with 1.

2. In the remote **Display** section of your RDP session, enable the **Use multiple monitors for the remote session option**, and then choose **All** or Selected.

Note that if you choose **Selected**, then you can use a space or a comma between the monitors to identify them. This will display your remote host on the monitor specified in the field. The remote host will only display and span from the first local monitor selected.

## Local Monitor and Desktop Selection

In External display mode, you can also select which local monitor you want the session to display. This option is available in the first drop-down menu.

The second drop-down menu should always be set to **Current Desktop**, unless you wish to display on a local virtual desktop.

Common	^ Name	Telemark DC1			
E General	Folder	Montreal			
Description	Display	External		Default	- Current Desktop
User Interface	Credentials	Inherited		Primary monitor	
Entry Information				Secondary monitor Current monitor	
Connection	A General D	Venlay Local Decources	Programe	Monitor #1	Industrial
VPN/SSH/Gateway	Remote Desk	ctop Size	riograma	Monitor #2	
Management Tools 🔹 👻	~   🗖 :	Screen sizing mode	Default	Monitor #3 Monitor #4	•
		Remote desktop size	Default	Monitor #5	C inter on screen
		Span on multiple screen	ns if possible	Monitor #6	
		Use multiple monitors fi	or the remote sessi	Prompt on connection	

And there you go! You're all set to see everything on every screen, just like Big Brother! We hope that you find this feature helpful. Please share your feedback by commenting below, or by posting in our <u>forum</u>.
